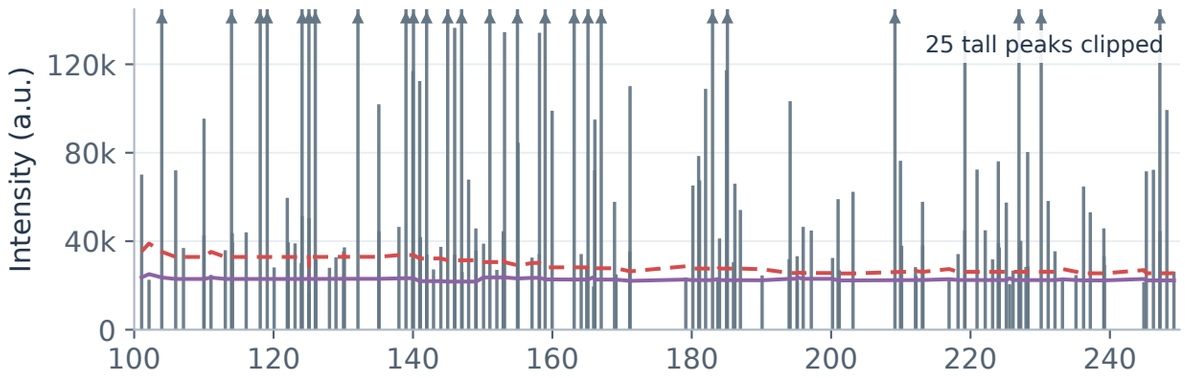
MS1 background: previous rule vs lowest 1%

NIST_POS_Samp_01-01.mzXML • scan 1823 • RT 299.839 s • m/z 100–250

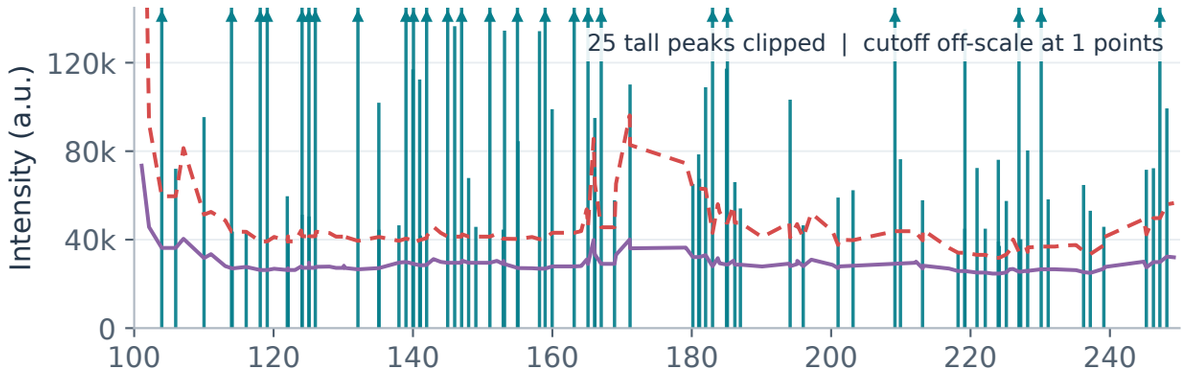
Previous cutoff scale

Median = 41.4k; 29% of axis height

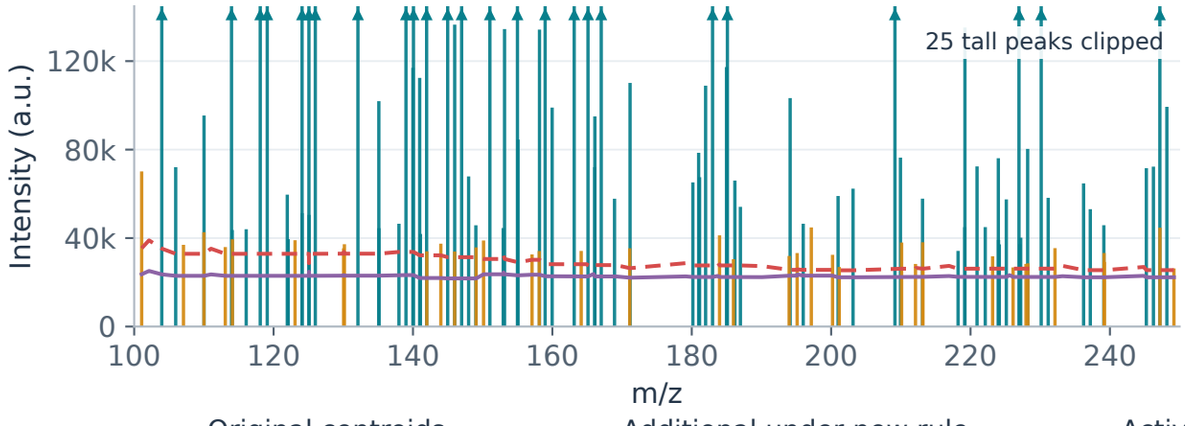
Before filtering · 148 centroids (new threshold overlaid)



Previous 5%, min 8 · 25 Da · 83/148 kept



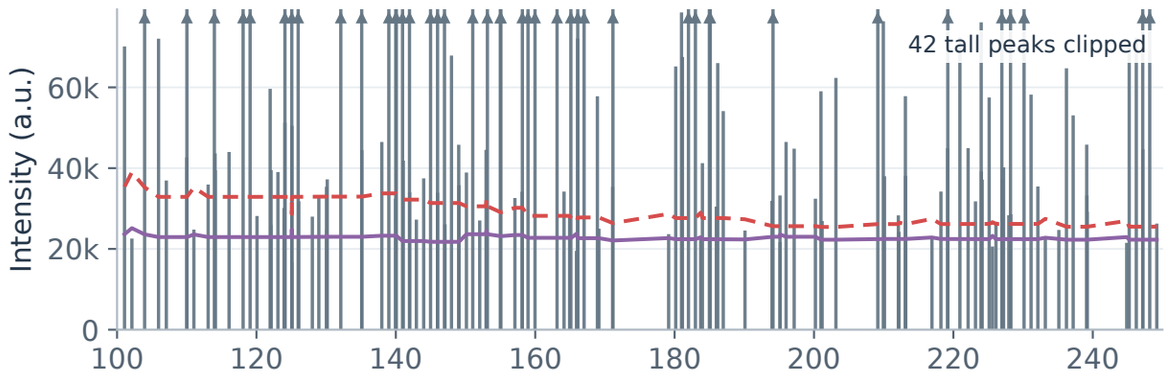
Lowest 1%, min 5 · 50 Da · 120/148 kept



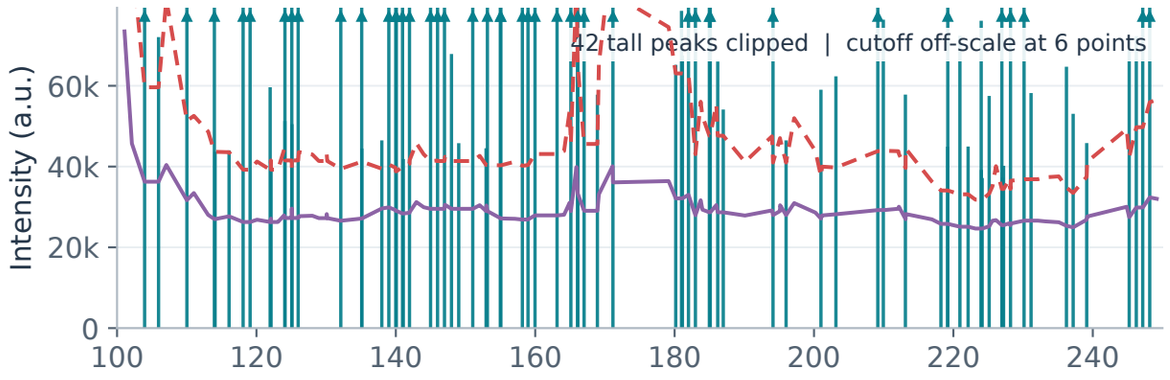
New background zoom

Median = 22.7k; 29% of axis height

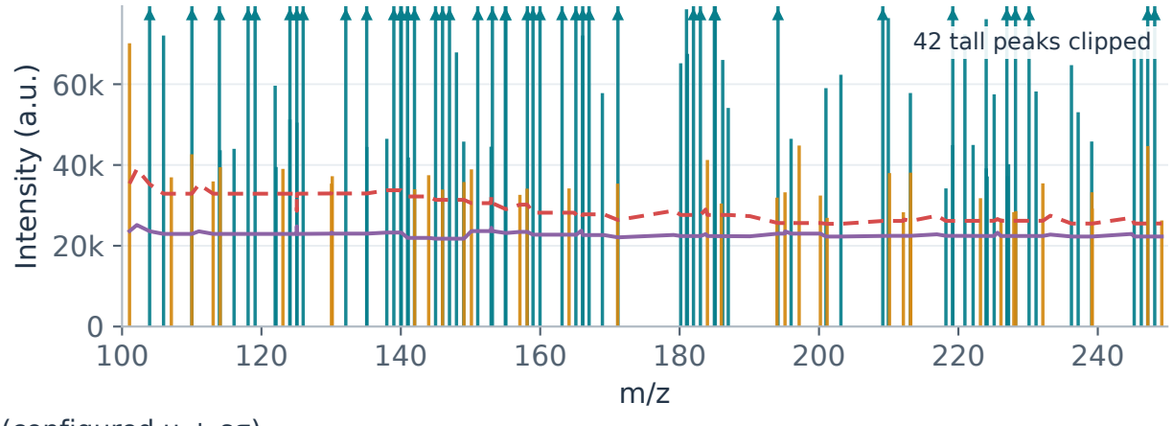
Before filtering · 148 centroids (new threshold overlaid)



Previous 5%, min 8 · 25 Da · 83/148 kept



Lowest 1%, min 5 · 50 Da · 120/148 kept



Original centroids
Kept by previous rule
Additional under new rule
Subset/background mean μ
Active cutoff (configured μ + sσ)

Identical raw intensities in both columns; shared axes within each column. ▲ marks peaks taller than the axis.

Full-scan estimates. New: 50 Da windows, 5 weak neighbors here. Previous: 25 Da. Removed ≠ confirmed noise.
