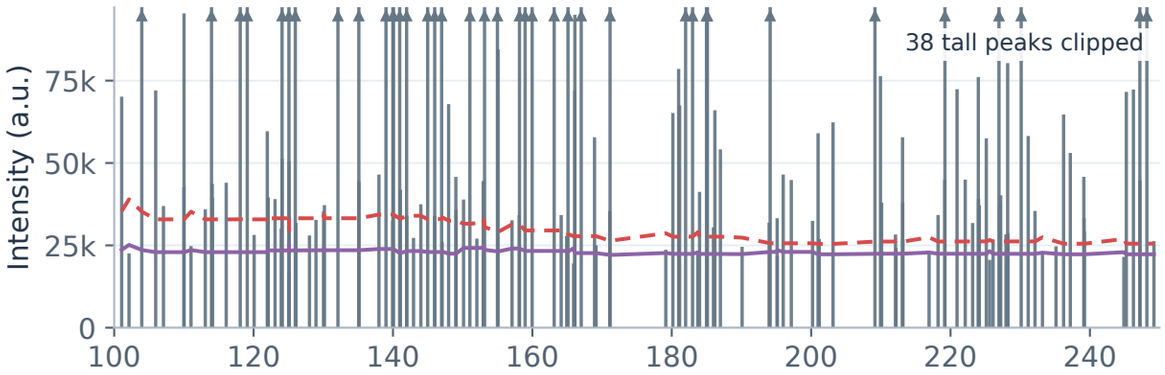
MS1 background: lowest 5% vs lowest 10%

NIST_POS_Samp_01-01.mzXML • scan 1823 • RT 299.839 s • m/z 100–250

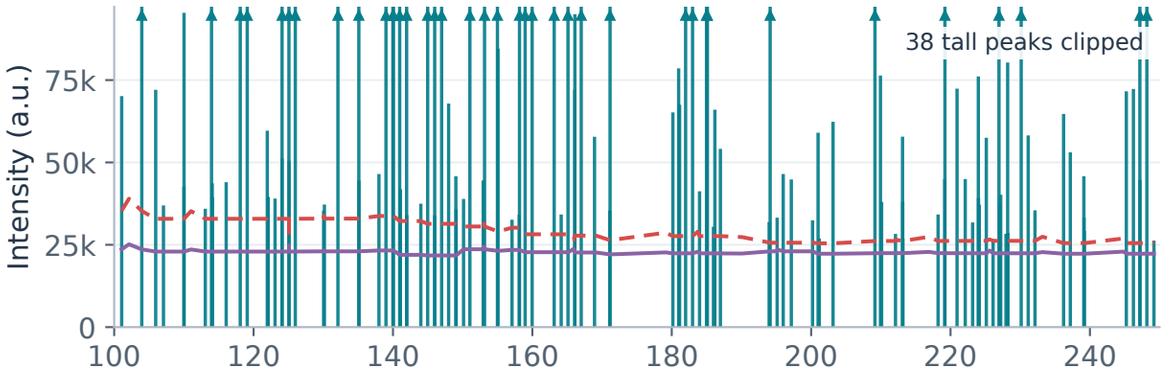
Comparison cutoff scale

Median = 27.8k; 29% of axis height

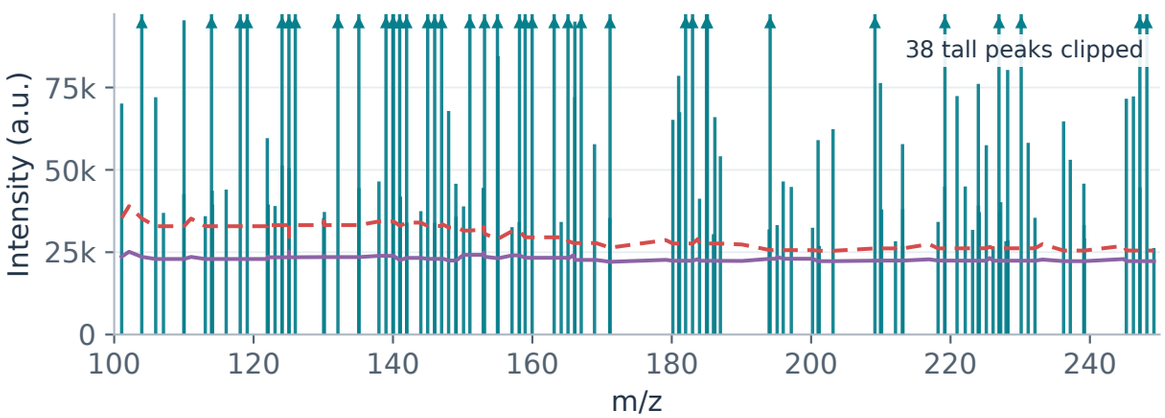
Before filtering · 148 centroids (new threshold overlaid)



Lowest 5%, min 5 · 50 Da · 120/148 kept



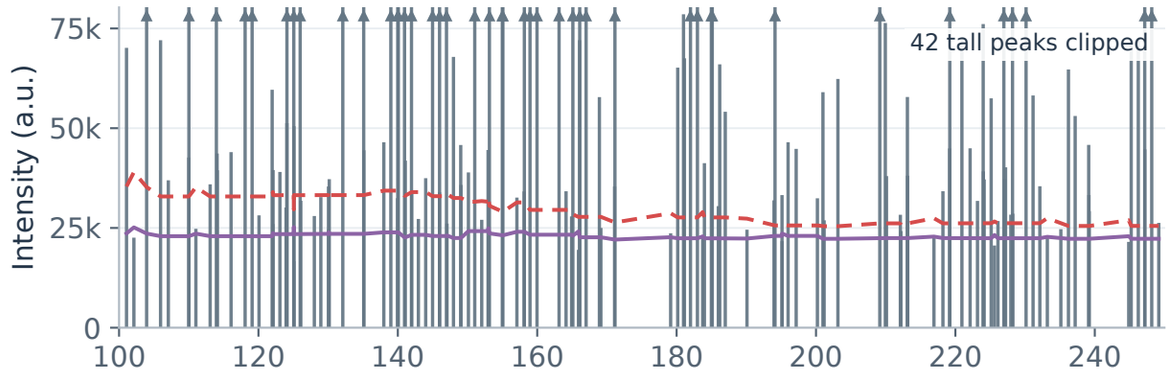
Lowest 10%, min 5 · 50 Da · 120/148 kept



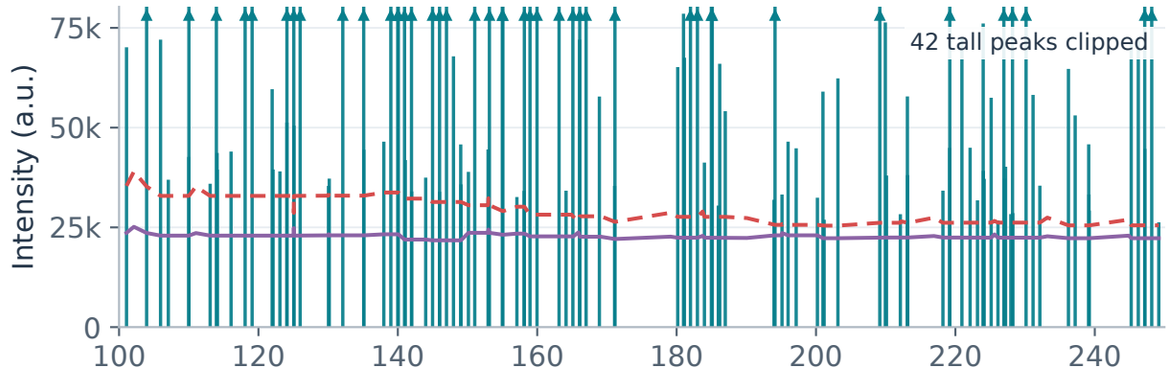
New background zoom

Median = 22.9k; 29% of axis height

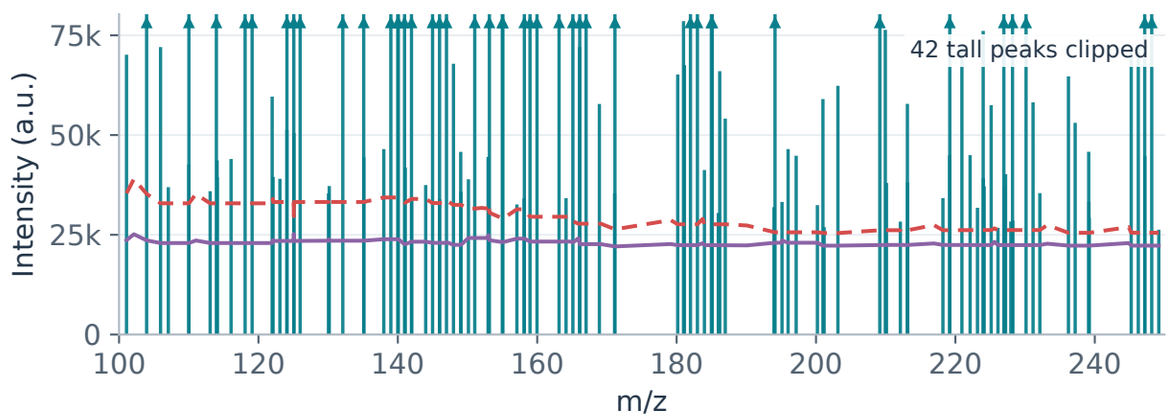
Before filtering · 148 centroids (new threshold overlaid)



Lowest 5%, min 5 · 50 Da · 120/148 kept



Lowest 10%, min 5 · 50 Da · 120/148 kept



Original centroids
Kept by comparison rule
Additional under new rule
Subset/background mean μ
Active cutoff μ + 3σ

Identical raw intensities in both columns; shared axes within each column. ▲ marks peaks taller than the axis.

Full-scan estimates. Current: 50 Da, 5–7 weak neighbors here. Comparison: 50 Da. Removed ≠ confirmed noise.
